

Algae Peel

The Peeling Company is committed to informing its customers. We believe that achieving good results depends on proper education. The information below is intended to inform you about our algae peeling treatment. If there are any questions, please let us know.

The Decaar Algae peel (Chinese herbal peel) is a treatment that works perfectly against acne, blemished and oily skin, pigmentation, skin aging, poor circulation and structure of the skin. This unique treatment is based on a combination of herbs and algae. The Algae peeling stimulates the cell division and gives you a fresh new epidermis within 10 days. This process normally takes between 24 and 28 days. In addition, the production of collagen and elastin (which provide strength and elasticity to the skin) is stimulated and the immune system is improved. The Algae peel works from the inside out, unlike virtually all other peels that work from the outside in.

For what type of skin conditions is the algae peel recommended?

- Acne, pimples and rosacea
- Blemish and blackheads
- Scars
- pregnancy and breastfeeding
- Pigmentation spots, melasma and age spots
- Sagging and poorly supplied (smoker's) skin
- Stretch marks
- Ingrown hairs

When should a peeling not be performed?

If you have any of the following conditions, unfortunately we cannot perform a peel for safety reasons. Active cold sores - Skin lesions, such as: active psoriasis on the face - sunburned skin - use of skin thinning medication such as roacutane - use of hydrocortisone - hormone treatments (only in consultation with treating physician).

How does this peeling work?

The microfibers of the peeling powder penetrate the skin, increase blood flow and the production of new cells. Since these cells are located in the cornified skin layer, the peeling can also be used on sensitive and rosaceous skin. By decreasing the cornified cells, redness is reduced. Because the Langerhans cells are stimulated and the excess bacteria are killed, this treatment is very suitable for skin problems such as acne, eczema and rosacea.

Before the treatment starts:

Before the first treatment takes place, there is always an intake meeting. During this conversation we will go through all your personal data. Then we will explain the treatment itself, your expectations, possible results and any contra indications.

What can I expect during and after the peeling?

The treatment is easy to experience, however it is not painless. After the treatment, whenever you touch the skin, it feels like very small glass splinters on the skin. In addition, the skin may become redder in the first 12 to 24 hours, since the blood flow is stimulated. The skin may also start to flake and be more red and sensitive the first few days, which is not the case for everyone. Finally, the skin may also become slightly restless, as the peeling detoxifies the skin you might see more breakouts. Please don't worry, this usually goes away after a few days and will not happen to everyone.

What can I expect immediately after a treatment?

- The feeling of glass splinters on the skin
- The skin may feel dry and tight the first week after a peel.
- The skin may start to peel after 2 to 3 days (not with everyone).
- The skin may start to feel red, irritated or burning (not with everyone).
- The skin may become slightly restless the first week after treatment (not with everyone).

Should I use certain products after the treatment?

To achieve the best results, we always give a customized home advice after the treatment. We recommend following this product advice at home. Important is the daily use of a daylight protection (minimum SPF 30). The product advice for home is part of our service with the aim of improving your skin. It is important to know that our advice commits you to nothing.

When do the results become visible?

You will probably notice improvements in the structure and appearance of your skin immediately after the first treatment. For optimal results, we recommend the treatment in a course to apply. In general, most people see results after 3 to 6 treatments. However, we want to emphasize that results depend on several factors. The main factors for achieving results are; type of skin problem, regeneration capacity of the skin, amount of stress, use of appropriate skin care products (including a daily protection against daylight of at least spf30). We will always do our best to treat your skin in an expert and honest way to improve the skin. However, we can never guarantee results. We also want to emphasize that flaking of the skin says nothing about how effective the peel is.

Will the treatment be reimbursed by my health insurance company?

Our skin therapists are registered with the Dutch Association of Skin Therapists and the Quality Register for Paramedics and our beauticians have an acne specialization and are registered with the Anbos. For various indications, such as acne or acne scars, in some cases a refund is possible. This varies by health insurer and policy. Ask your health insurer about this. If you qualify for reimbursement, the treatment will be paid for at our clinic and you can submit our invoice to your health insurer. Reimbursement will only be applied to people who actually suffer from acne or acne scars. If this is not the case, they will not be reimbursed.

Prices

- | | |
|----------------------------|--------|
| ● Algae-peeling face | €99,- |
| ● Algae-peeling upper back | €99,- |
| ● Algae-peeling whole back | €129,- |
